Winter Safety Strategies: Keeping Schools Secure Amid Seasonal Challenges

As winter approaches, schools face unique risks: icy sidewalks, snowstorms, frigid temperatures, and seasonal illnesses. It's an ideal time for administrators, educators, resource officers, and safety teams to review emergency plans, provide winter-specific training, and conduct drills to maintain a safe and resilient learning environment. Below are key topics every school should address now, along with practical suggestions informed by [NJDOE's guidance](#).

Key Areas to Review:

- **Winter Weather Preparedness:**
 - Plan for snow, ice, freezing temperatures and potential power outages. Update all-hazards safety plans to including winter emergencies. Confirm procedures for closures/delayed openings and ensure snow/ice removal materials and equipment are ready.
- **Building Security in Cold Weather:**
 - Cold conditions can impact building access, heating systems and exterior safety. Review vulnerability assessments, check HVAC systems and ensure walkways, parking lots, and bus areas are safely maintained to prevent slips and falls.
- **Safety Drills for Winter Scenarios:**
 - Revisit emergency drill requirements and consider winter-specific situations such as power failures or severe storms. Review and update your district's safety and security plan as required by NJDOE.
- **Effective Communication:**
 - Verify that notification systems are functioning and contact lists are current. Communicate procedures for weather-related closures, early dismissals, and emergency responses clearly and proactively.
