Strengthening CAIP Security

J. Byrne Insurance Agency + Xcitium

Proactive cybersecurity services designed to help J. Byrne Insurance Agency support CAIP with stronger risk visibility, practical employee education, and measurable security improvement.

External Vulnerability Scans

Identify externally exposed security weaknesses.

- Scan internet-facing systems and services for known vulnerabilities.
- Identify outdated software, configuration weaknesses, and exposed risks.
- Prioritize findings so critical vulnerabilities can be addressed first.
- Provide actionable insight to reduce the external attack surface.
- Reporting supports security, risk, compliance, and leadership discussions.

SAFE Training + Phishing Simulation

Build a stronger human layer of defense.

- Fully managed - Xcitium handles campaigns, training, scheduling, tracking, and reporting.
- Interactive courseware with knowledge checks reinforces real learning.
- Quarterly phishing simulations test users against realistic attack scenarios.
- Threat Labs intelligence keeps content aligned with current attacker tactics.
- Reporting identifies repeat offenders and areas needing added attention.

Supporting CAIP with Two Critical Layers of Cybersecurity

Identify Risk

Surface externally visible vulnerabilities before they can be exploited.

Reduce Human Risk

Strengthen employee awareness against phishing and social engineering.

Improve Visibility

Provide stakeholders with clear reporting, findings, and prioritized next steps.

Proactive scanning. Practical training. Stronger cyber resilience.

Xcitium solutions currently supporting J. Byrne Insurance Agency's CAIP initiatives.
